DV200: API Research Report

Tsebo Ramonyalioa | 200200

I was assigned to do research into API's, which is the first step that I need to do for my term 1 assignment. I found this process insightful as I learnt how to read and understand API Documentations.

API: Jikan

Description of API:

Jikan api gives information about anime and manga, it is an unofficial api from MyAnimeList.

Outline of Dataset Characteristics:

Jikan gives information about anime such as characters, actors, rating, duration, videos and pictures too.

Outline of Comparative Data:

Comparative data that can be utilised would be the scoring, rank, favourites, members and popularity.

Outline of Timeline Data:

Timeline data that I can implement is the aired duration. I could either use the time it was realised or the time it ended.
